

MINI Project (BCC351) Report

on

Rental Website

Submitted as partial fulfillment for the award of

BACHELOR OF TECHNOLOGY DEGREE

Session 2024-25

in

Computer Science & Engineering

By

MUDIT KUMAR SINGH	2300320100156
MUKUL KUMAR	2300320100157
MONU KUMAR	2300320100155

Under the guidance of

Ms. Aditi Arora, Assistant Professor

ABES ENGINEERING COLLEGE, GHAZIABAD

**AFFILIATED TO
DR. A.P.J. ABDUL KALAM TECHNICAL UNIVERSITY, U.P., LUCKNOW
(Formerly UPTU)**

STUDENT'S DECLARATION

We hereby declare that the work being presented in this report entitled "Rental Website" is an authentic record of our own work carried out under the supervision Ms. Aditi Arora, Assistant Professor.

I have duly acknowledged all the sources from which the ideas and extracts have been taken. The report has not been submitted elsewhere for publication.

Dated: 09/01/2025

Signature of students(s)

Mudit Kumar Singh

Mukul Kumar

Monu Kumar

**Department: Computer
Science & Engineering**

This is to certify that the above statement made by the candidates is correct to the best of my knowledge.

Signature of Supervisor

Ms. Aditi Arora

Assistant Professor

**(Computer Science & Engineering
Department)**

CERTIFICATE

This is to certify that Project Report entitled “ORS” which is submitted by Mudit Kumar Singh (2300320100156), Mukul Kumar (2300320100157) and Monu Kumar (2300320100155) in partial fulfillment of the requirement for the award of degree B. Tech. in Department of Computer Science & Engineering of Dr. A.P.J. Abdul Kalam Technical University, formerly Uttar Pradesh Technical University is a record of the candidate own work carried out by him/them under my supervision. The matter embodied in this thesis is original and has not been submitted for the award of any other degree.

Supervisor

Project Coordinator

Prof. (Dr.) Divya Mishra

Date 09/01/2025

HOD-CSE

ACKNOWLEDGEMENT

It gives us a great sense of pleasure to present the report of the B. Tech Project undertaken during B. Tech. Second Year. We owe special debt of gratitude to Ms. Aditi Arora , Assistant Professor, Department of Computer Science & Engineering, ABESEC Ghaziabad for her constant support and guidance throughout the course of our work. Her sincerity, thoroughness and perseverance have been a constant source of inspiration for us. It is only her cognizant efforts that our endeavors have seen light of the day.

We also take the opportunity to acknowledge the contribution of Professor (Dr.) Divya Mishra, Head, Department of Computer Science & Engineering, ABESEC Ghaziabad for her full support and assistance during the development of the project.

We also do not like to miss the opportunity to acknowledge the contribution of all faculty members of the department for their kind assistance and cooperation during the development of our project. Last but not the least, we acknowledge our friends for their contribution in the completion of the project.

ABSTRACT

Health Care Management Web Application : THE ORS

Abstract

The Online Registration System (ORS) is a digital platform widely used in Indian government hospitals to streamline patient appointment processes, reduce waiting times, and improve healthcare efficiency. While highly effective in metropolitan and urban centers, its reach remains limited, leaving smaller district hospitals and rural areas reliant on traditional, time-intensive methods. This disparity exacerbates challenges such as long queues, delayed healthcare delivery, and reduced patient satisfaction in underserved regions. To address these issues, we propose an enhanced ORS platform that expands access to digital healthcare management across all hospitals, including private and government facilities in rural and small-town settings. The upgraded system will facilitate online appointment bookings, generate digital prescription letters, and improve overall patient care. By extending the benefits of modern healthcare technology to all regions, this initiative aims to bridge the gap in healthcare accessibility, ensuring equitable and efficient healthcare services for all.

1. Introduction:

The **Online Registration System (ORS)** is a digital platform extensively used in many Indian government hospitals to simplify the appointment process for patients. By enabling online registration, it minimizes the need for patients to physically stand in long queues, making the process more efficient and patient-friendly. Additionally, the system generates prescription letters, commonly referred to as *parcha*, in PDF format, ensuring that medical documentation is both accessible and well-organized.

While the ORS has proven to be effective in large government hospitals, its usage is largely restricted to metropolitan cities and urban areas. Smaller district hospitals in towns and rural regions often do not have access to such systems, leading to persistent challenges, including long queues, delays in healthcare delivery, and an overall lack of efficiency in managing patient appointments. These limitations can be particularly burdensome for patients in underserved areas, who may already face significant barriers to accessing timely medical care.

To bridge this gap, we propose the development of an **advanced ORS system** that extends the benefits of digital healthcare management to all hospitals, regardless of their size or location. This upgraded platform will allow *any hospital*, whether government or private, to register on the system, enabling patients to book appointments online easily. The goal is to provide equitable access to efficient healthcare management tools, reduce waiting times, and enhance the overall patient experience, particularly in smaller towns and rural regions. This initiative aims to democratize healthcare accessibility, ensuring that quality care is no longer limited by geography or infrastructure constraints.

2. Methodology:

Hardware requirement

We developed the front-end of our website directly on our personal laptops, leveraging the flexibility and convenience of local development. This allowed us to quickly prototype and iterate on designs, ensuring that we could make real-time adjustments and test features efficiently. By using local environments, we were able to work collaboratively, troubleshoot issues promptly, and ensure that the website's user interface was polished and responsive before deployment. This hands-on approach enabled us to maintain control over the development process while also fostering a productive and agile workflow.

Software requirements

The most widely used software in our project is Visual Studio Code (VS Code), a highly efficient and user-friendly Integrated Development Environment (IDE). VS Code stands out for its versatility and speed, offering a clean, intuitive interface that enhances the coding experience. It is particularly coder-friendly, providing a variety of powerful features such as intelligent code completion, debugging tools, integrated version control, and an extensive library of extensions that make writing, testing, and managing code faster and more efficient. Whether for front-end, back-end, or full-stack development, Visual Studio Code has proven to be an invaluable tool in streamlining our development workflow and boosting productivity throughout the project.

3. Implementation:

Step-Wise Website Development Process:

1. Create Basic Layout Using HTML

- Establish the foundation of the website structure using HTML.
- Define essential sections such as the navigation bar, welcome area, features, about us, achievements, specialties, contact information, best staff, director's quote, blog, and footer.

2. Style the Layout Using CSS

- Use CSS to style the HTML structure for a visually appealing and user-friendly interface.
- Ensure consistent design elements, such as fonts, colors, and spacing, throughout the website.

3. Develop the Navigation Bar

- Add a logo and key links for smooth navigation between website sections.
- Make the navigation bar responsive for various devices.

4. Design the Welcome Section

- Include a heading, two paragraphs, and two buttons to introduce the website to users.
- Use an engaging design to set the tone for the user experience.

5. Build the Features Section

- Highlight main functionalities, such as a symptom checker, online booking, report tracking, and online consultations.

- Use icons or graphics to make the features visually appealing and easy to understand.

6. Create the About Us Section

- Provide essential information about the hospital, including its history and mission.
- Add an interactive question form for users to submit concerns or queries.

7. Design the Achievements Section

- Highlight key milestones, such as the number of patients treated, major operations performed, operating theatres, and trained students.
- Use counters or infographics to present data dynamically.

8. Showcase Hospital Specialties

- List expert services, such as dental, neurosurgery, and radiology.
- Include brief descriptions and relevant icons or images.

9. Develop the Contact Us Section

- Provide essential contact details, including phone numbers, email, and address.
- Assure users of 24/7 assistance availability.

10. Highlight the Best Staff Section

- Feature dedicated doctors and healthcare professionals with brief profiles.
- Include photos and highlight their expertise to build trust.

11. Add a Director's Quote

- Include an inspirational or reassuring message from the Director or senior hospital official.
- Position the quote prominently to reinforce the hospital's mission and values.

12. Design the Blog Section

- Create cards to display articles, updates, and health tips.
- Include brief summaries and links to detailed posts.

13. Develop the Footer

- Add essential information, such as important links, the hospital's address, and contact details.
- Ensure the footer is easy to navigate and consistently visible.

14. Test Responsiveness and Accessibility

- Test the website on various devices to ensure it is responsive and accessible to all users.
- Make adjustments to improve user experience as needed.

5. Results and Discussion:

The outcome of our work so far is the successful creation of a solid layout that serves as the foundation for the entire webpage. We've carefully chosen a cohesive and visually appealing color combination that enhances the overall design, ensuring a pleasant user experience.

While our main objective was to advance to JavaScript and incorporate dynamic functionality into the webpage, we faced some challenges that prevented us from fully achieving this goal. These challenges included academic constraints and our limited knowledge of JavaScript at this stage. However, despite these setbacks, we have made significant progress.

We can confidently say that our proficiency in CSS has reached a substantial level, and we are now capable of creating any layout presented to us. Our CSS skills enable us to efficiently style and structure webpages, ensuring they are responsive and visually engaging. Furthermore, we have gained the ability to design layouts independently on platforms such as Figma, allowing us to prototype and visualize designs before translating them into code.

This progress has equipped us with a solid foundation in web development, and we are eager to continue building on our skills as we move forward in mastering more advanced topics like JavaScript.

5. Conclusion:

The key findings from this project are that we have gained a solid understanding of CSS and have successfully mastered its various properties. A prime example of this is the display: flex property, which is one of the most widely used properties in web development due to its ability to create flexible and responsive layouts. This is just one of many CSS properties we've become proficient in throughout the course of this project, each of which has contributed to our ability to design and build more polished, user-friendly websites.

Additionally, we are eager to continue expanding our skill set by learning new technologies and further mastering the ones we've already acquired. Our goal is to deepen our expertise in both front-end and back-end development, and we are excited about the prospect of incorporating these new technologies into future projects.

The significance of our project cannot be overstated. The long queue problem faced by patients in government hospitals is a major issue, and this project has the potential to be a game-changer in the healthcare sector. Once developed into a full-stack solution, our platform will streamline the patient appointment process, reduce wait times, and improve overall healthcare management. The project holds the promise of revolutionizing how healthcare services are accessed, particularly in government hospitals, where the demand for efficient systems is critical.
